

System Requirements

The recommended system requirements for operation of the Annual Report System are as follows.

Recommended System:

The recommended system is based on systems that are easily available and affordable at most computer retailers. The more powerful the system, the faster it will run and the longer it should serve your needs.

- **A Pentium IV** The system will run faster and more reliably with a more powerful Central Processing Unit. The Windows operating system will also run much more efficiently.
- **256 MB or more Random Access Memory (RAM).** More memory allows programs to run faster and minimizes the chance that the Annual Report System will interfere with or be interfered with by operation of other programs on your system.
- **Microsoft Windows 2000 or Windows XP or higher.**
- **Microsoft Access 2002/2003.** This software will be used to review and edit data as needed.
- **60 MB free hard disk space.** New systems typically come with hard drives that are at least 20 GB; depending on your other needs, this should easily provide enough free space.
- **An HP laser-jet or ink-jet printer with 600 dpi resolution.** The Annual Report System is developed with this standard in mind. Other printers less than 600 dpi may produce grainy output and may give unpredictable results.
- **A 15-inch monitor with a resolution set at least at 800 x 600 pixels.** If you are concerned that operating at this resolution will be difficult to read, you may want to consider a 17 or 19-inch monitor.
- **Internet Web access.**
- **Internet e-mail account.**
